Customer Reviews

Book by Redington, Charles B.

Great plant guide book with more ecological information than any other guide book you may have. Must have if in the business of knowing all about plant species use and ties to local plants/animals.

More than a identification guide, this steel-spiral bound book explores how plants fit into the daily life of wetlands. Covering an area generally from Canada to Florida, between the Mississippi and East coast, it describes how plants interact with insects, mammals, reptiles, people, and so on. It is not a complete flora, but it was not meant to be. The entries read like nature center or museum displays; plain English, but still with enough technical features to make a confident ID. The book includes a glossary, species list for interacting organisms, and field forms to record observations on specific plants. 394 pages.
