Clinical Decision Making: Case Studies In Pharmacology

Synopsis

Clinical Decision Making Case Studies in Pharmacology is a systematic, application-based resource for users to develop their nursing knowledge in clinical situations. This book contains 40 pharmacology case histories and questions, based on real life client situations, which make learning easier and more memorable than textbook discussion. Current review of literature indicates that many users believe that case study in pharmacology enhances learning and improves examination success. Each case in this innovative book is followed by a series of questions and appropriate nursing responses, which encourages analytical thought and consideration of numerous variables. Because each case opens with a blueprint of key variables to consider, no two cases are alike. Users will need to consider such things as collaborative management, gerontological considerations, complementary and alternative therapy, patient teaching, discharge planning, and delegation and prioritization to make decisions regarding care. Because nursing is an art and a science, the responsibility of nurses can be challenging. Clinical Decision Making will provide students with actual insight into clinical practice and application of theory to meet those challenges.

I bought this book for an pharmacology course for nursing school, so it was required for me to buy it. This book highlights tons case studies and it prepares you to think critically on how to take care of patients. The context was a bit dry, however, it was definitely useful.

good

Waste of money.

I purchased this book for nursing school and found it to be helpful in my studies. It's easy to read and to the point.

Used for graduate school had good case studies.

love
