Ready For Take-Off: Preparing Your Teen With ADHD Or LD For College

Synopsis

In today's world, getting accepted to college is only half of the battle. Staying in there is another matter altogether. And for students with ADHD or learning disabilities, staying, thriving, and graduating from college can be very challenging even for the most academically prepared students. *Ready for Take-Off* lays out a plan to keep students with ADHD or LD in college by first teaching parents to prepare their teen for take-off and their first solo flight away from the home. This essential resource encourages parents to adopt a unique coaching-style approach in their parenting and urges parents to stop micromanaging their teens' day-to-day life. Using college readiness surveys and handy worksheets, parents can objectively determine if they are playing a productive or nonproductive role in their teenagers' life and learn ways to promote self-determination, daily living and academic skills by using the time in high school to help their teen be ready for take-off in their teen while their teen is still in high school.

Customer Reviews

Sending an ADHD child off to college can be terrifying. *Ready for Take-Off* provides a practical, down-to-earth game plan that allows parents and kids to make the break with maximum success and minimal disruption. This book tells parents exactly what to do and just as important--what not to do! --Thomas W. Phelan, PhD, author, *1-2-3 Magic: Effective Discipline for Children 2-12* and *Surviving Your Adolescents*
Ready For Take-Off is the indispensable guide for teens with ADHD and their parents in making the transition to college and then managing college well. Written by real pros in the ADHD field, this book is practical, useful, needed, and utterly reliable. I recommend it

highly! --Edward Hallowell, MD; Harvard Medical School; founder, The Hallowell Centers; author, *Married to Distraction: Restoring Intimacy and Strengthening Your Marriage in an Age of Interruption* An Honors NAPPA (National Parenting Publications Awards) Winner, 2010. "Fills the huge gap that suddenly appears between the parental involvement (and sometimes micro-managing) of high school, and the independence of college." --National Parenting Publications Awards, 2010

Patricia O. Quinn, MD, is a pediatrician in Washington, D.C. and is the director of the National Center for Girls and Women with ADHD. She is the author of *Putting on the Brakes* (2nd Edition, APA Books) and other books on ADD/ADHD

Good to read, best to buy in the senior year of high school though. It has a lot of great information about things to do to prepare them to leave, but that those need to be started long before you pack the car. I wish we would have read it earlier as many of the challenges that she warns about have presented themselves in our college freshman.

Is your child bright enough for college but needs your help to get through the daily grind of high school? Do you worry whether she or he will thrive on campus alone? Me, too. That's why it was such a relief to find this book. *Ready for Take-Off* provides a checklist of specific college survival skills and advice on coaching your child to acquire them. Dr. Maitland's goal is to help you gradually put your teen in charge of managing his or her own life so the transition to college will go more smoothly. I wish schools would put this book in the hands of all parents of teens with ADD or LD.

Everyone should read this book if they are launching off a teen with ADD

Even though my child was already in college, I found this book to be extremely helpful and informative. I wish I had come across it earlier, but glad I found it when I did.

This was a great book for helping your teen set goals and plan the future . Gives examples on how to talk to them and couch them, and have them think for themselves . It was very helpful for teens in high school..

Be proactive with your high schooler with ADHD and read this book. Dr. Maitland knows there are

many reasons why smart college students with ADHD and LD struggle to succeed in college. She is a disability specialist at UNC-Chapel Hill who has seen all the pitfalls up close, and acts as a wise guide to prevent it from happening to your kid. Let's face it folks--raising a student with a disability is a tight rope act at best. It is fertile ground for growing parents who are enablers. We all know how to step in, but Dr. Maitland coaches you how to step back and train skills of daily living, self-determination, and study skills BEFORE students leave home. This book has short quizzes for both parent and student to help you both make a Personalized College Readiness Program. Both authors are reassuring about watching your student fail first at home. It is the best place to practice. I'm going to recommend this book to my SEPAC group and invite Dr. Maitland to present her plan in person at one of our meetings. EYE OPENING!

Should be required reading for any parent who sends a child off to school. Ready for Take-Off really gets you thinking about how to raise your child to be independent and to take care of the things they need to be successful in a college environment. The checklist is great. This book is the small yet vital investment all parents need to safeguard that big investment into your child's education.

Excellent! The authors of this book are absolutely dead on with their experience and insight on ADHD, LD students and recommendations for planning now, complete with discussion points and planning outlines, for the critical transition to college. This book was easy to read and it is organized in a very useful, practical manner. I have shared it with all of the parents I know facing a similar college transition with their ADHD and or LD teenager. I highly recommend.
